

Kross Booking Widget

Installation guide

[\[Vai alla guida in italiano →\]](#)

GENERAL INSTRUCTIONS

Beware! Changing the code on the website may affect the functioning of the entire website. Kross Booking cannot be held liable for any malfunctions.

THE TUTORIAL SHOULD BE FOLLOWED STRICTLY STEP BY STEP, WITHOUT SKIPPING ANY STEPS.

It is strongly recommended that you first test everything on hidden pages or by first setting the website in maintenance mode.

Before the widget integration, please check with Kross Booking staff that the Booking Engine has been activated for your property.

PRELIMINARY SETTINGS ON KROSS BOOKING PMS

STEP 1

Please enter your Kross Booking profile, then go to: **Utilities > Widget BE**, click on the green "**Setup a new widget**" button at the top left of the screen.

+ Configura nuovo widget

Righe da 1 a 1 su 1 totali

Ricerca veloce

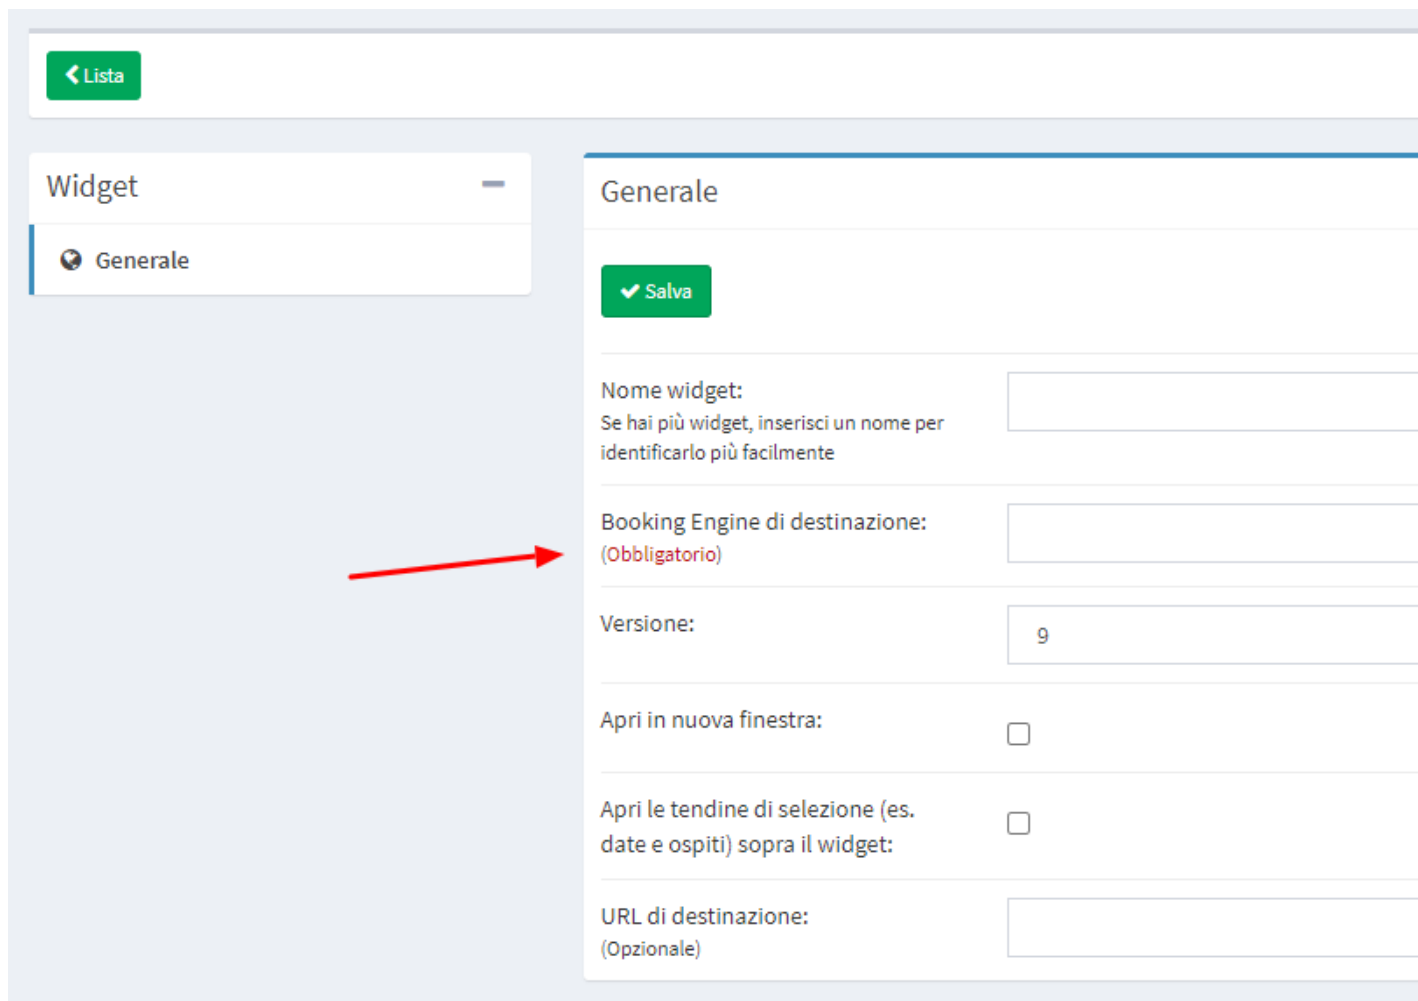

ID	Nome widget	Booking Engine	Data creazione	Versione	Canc
2	Test	giulia	17/11/2017	9	

STEP 2

Select the desired Booking Engine among those already created, then click on "Save".

Do not write in the destination URL field unless specifically indicated by the staff, otherwise the widget will not work properly.

The screenshot shows a web interface for configuring a widget. On the left, there is a sidebar with a 'Widget' section containing a 'Generale' option. The main area is titled 'Generale' and contains a 'Salva' button. Below the button are several form fields: 'Nome widget' with a hint 'Se hai più widget, inserisci un nome per identificarlo più facilmente', 'Booking Engine di destinazione' (marked as '(Obbligatorio)'), 'Versione' (with the value '9'), 'Apri in nuova finestra' (checkbox), 'Apri le tendine di selezione (es. date e ospiti) sopra il widget:' (checkbox), and 'URL di destinazione' (marked as '(Opzionale)'). A red arrow points to the 'Booking Engine di destinazione' field.

STEP 3

You can now also set colours and other options which will be displayed in the widget later. The data will be transferred automatically, you do not need to setup these parameters on your own website.

Remember to save your settings after each change!

INSTALLATION ON AN HTML PAGE

The widget requires jQuery and has to be installed and included before the widget.

You can use the following code in order to easily add it:

```
<script src="https://ajax.aspnetcdn.com/ajax/jquery/jquery-3.4.1.min.js"></script>
```

STEP 1

Enter the **Kross Booking profile > Utilities > Widget BE** and select the widget to install

Installa su pagina HTML

Aggiungi i seguenti codici per installare il widget di Kross Booking sul tuo sito:

jQuery:
Includere la libreria jQuery se non è già inclusa

[Anteprima](#)

```
<script src="https://ajax.aspnetcdn.com/ajax/jquery/jquery-3.4.1.min.js"></script>
```

HEAD script:
Inserire questo codice nell'HEAD della pagina web

```
<link rel="stylesheet" type="text/css" href="https://data.krossbooking.com/widget/v6/giulia/2.css" media="all" />
<script type="text/javascript" defer="defer" src="https://data.krossbooking.com/widget/v6/giulia/2.js"></script>
```

BODY script:
Inserire questo codice nel BODY della pagina web, dove si vuol far comparire il widget

```
<div class="kross-container"></div>
```

ADVANCED CUSTOMISATION

You can also add these parameters to the shortcode:

- **"data-lang"** with values *it*, *en*, *fr*, *de*, *es*; if empty, the Italian language is set by default
- **"data-id-room"** with a numerical value that identifies the ID of the type or the property (only for specific Booking Engine) on which to perform the search and retrieve the availability

Esempio: `<div class=kross-container" data-id-room=5 data-lang="en">`

INSTALLATION ON WORDPRESS / latest version: 6.2.1

Changes must be implemented by users who are aware of what they are doing and have basic WordPress skills.

The widget requires jQuery and must be installed and included before the widget.

You can easily add it using the following code:

```
<script src="https://ajax.aspnetcdn.com/ajax/jquery/jquery-3.4.1.min.js"></script>.
```

STEP 1

Please enter the Kross Booking profile > Utilities > Widget BE and select the widget to be installed

	2	Test	giulia	17/11/2017	9 

STEP 2

Download the plugin from the **"Install on WordPress"** section by clicking on **"Download ZIP for WordPress"**.

The screenshot shows the WordPress plugin installation interface. On the left, there is a sidebar with a 'Widget' section containing a list of categories: 'Generale', 'Stili', 'Pulsante di contatto', 'Opzioni', 'Installa su pagina HTML', and 'Installa su WordPress'. The 'Installa su WordPress' option is selected. The main content area is titled 'Installa su WordPress' and contains the following elements:

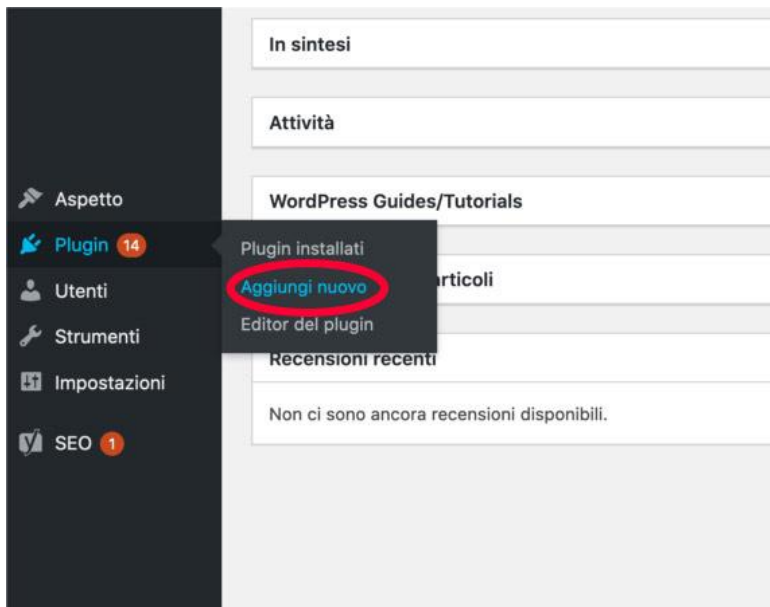

- A green button labeled 'Download ZIP per WordPress' with a download icon, highlighted by a red arrow.
- A section titled 'Scarica e installa il plugin per WordPress:'.
- A section titled 'Istruzioni di installazione plugin:' with a blue button labeled 'Vai alla guida'.
- A section titled 'Invia guida:' with three buttons: 'Email', 'Whatsapp', and 'Telegram'.
- A section titled 'Dopo l'installazione del widget, inserisci i seguenti parametri:'.
- Two input fields: 'Hotel ID:' with the value 'giulia' and 'Widget ID:' with the value '1'.

STEP 3

Log in to the WordPress private area of the website.

STEP 4

Install the Plugin on WordPress from Plugin > Add New, then select the ZIP folder you downloaded earlier.

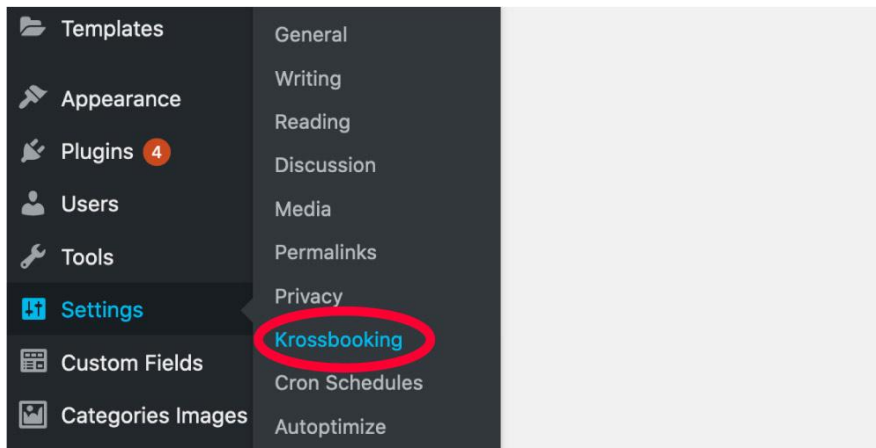

Click on "Install" and when it is done, click on "Activate" from the list.

STEP 5

From **Wordpress > Settings > Kross Booking:**

Enter exactly the same configuration as proposed in Kross Booking and click on "Save".

Save Changes

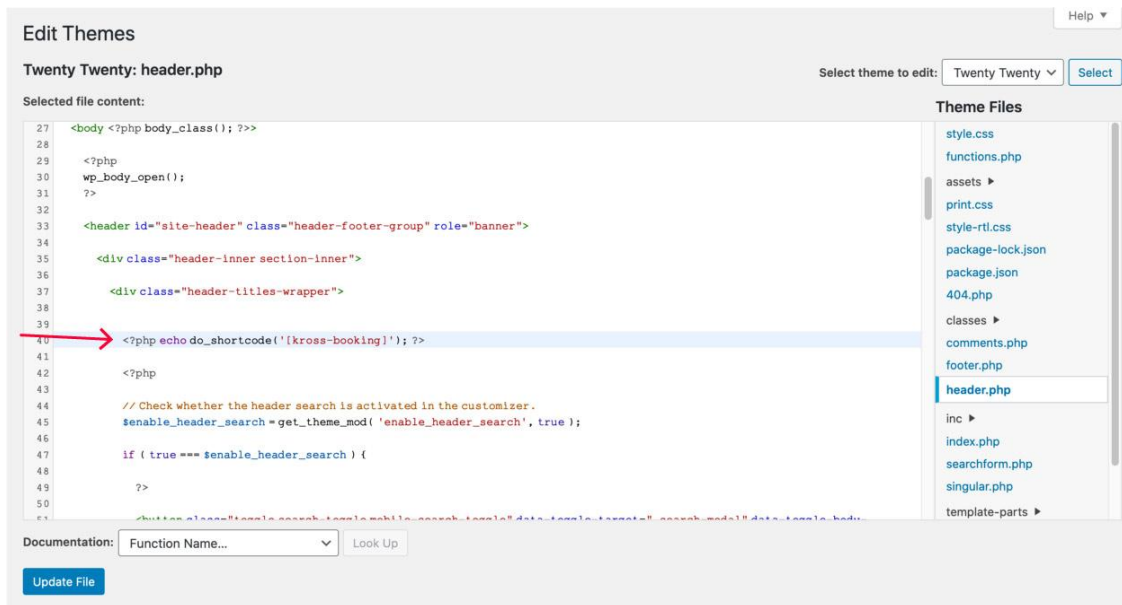

STEP 6

Within your website, enter the shortcode **[kross-booking]** in the exact place where you want the widget to appear.

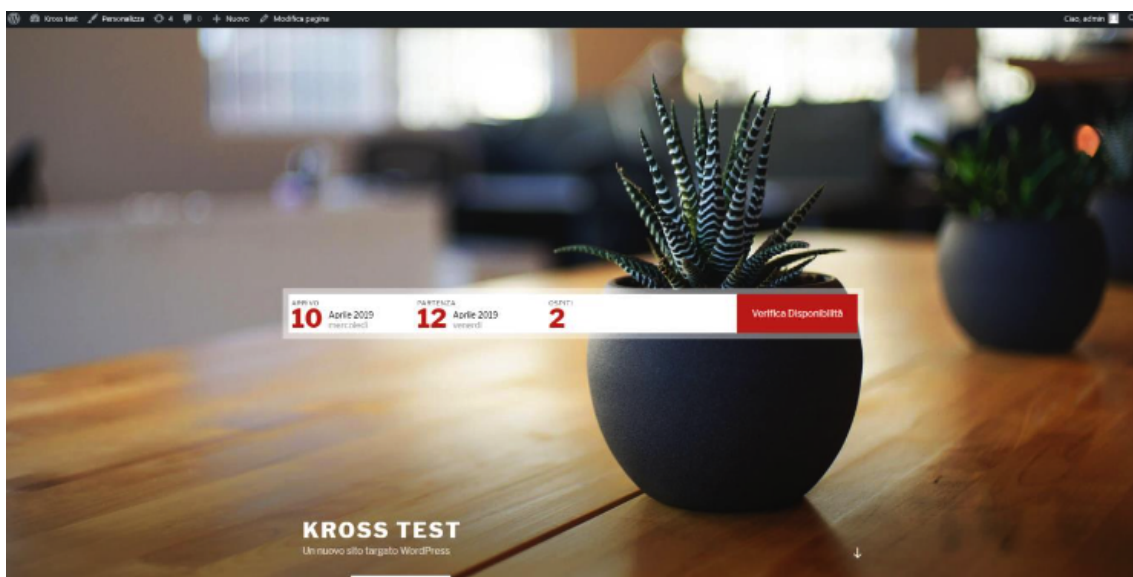

Alternatively, you can use the PHP function:

```
<?php echo do_shortcode('[kross-booking]'); ?>
```

to be included in the layout or header from **WordPress > Appearance > Editor**

The expected result is as follows

Be aware that after the installation, each time you change the configuration, you must refresh your browser cache by navigating to the page where the widget has been added and pressing CTRL + F5 (on Windows/Linux) or CMD + R (on Mac).

ADVANCED CUSTOMISATION

You can also add these parameters to the shortcode:

- **"lang"** with values *it, en, fr, de, es*; if empty, it will be filled automatically according to the WP language
- **"id"** with a numerical value that identifies the ID of the type or the property (only for specific Booking Engine) on which to perform the search and retrieve the availability

Example: `[kross-booking id=5 lang="en"]`
